Table 39. Risk tiers and the minimum controls each tier requires

Tier	Typical systems	Minimum required controls	Who approves
T0 Prohibited	Social scoring; mass or indiscriminate biometric surveillance; profiling people's political or religious opinions; deceptive synthetic media of real people; manipulation exploiting vulnerabilities	Not built, not piloted, not supported by BAPIL under any arrangement	Excluded by charter
T1 Low	Research tools and search over public documents; internal dashboards of published data	AI system record; model or data card; evaluation report; audit logging; public listing in the transparency register	Unit lead and TAB
T2 Limited	Advisory tools used by officials; public dashboards, reports and other public-facing information tools; aggregate analysis of de-identified feedback	All T1 controls plus: ERRC review; red-team test; human review of every output in use (for public dashboards and reports, review of every release); user training; incident procedure; quarterly monitoring report	ERRC (Steering Board consulted)
T3 High	Any system that informs decisions about specific people or entities, processes personal data at scale, or is used in enforcement	BAPIL does not build T3 operational systems. Research only, with: DPIA, legal review, independent audit, ERRC approval, and a published impact assessment	ERRC (binding) and host-agency legal review
