Table 29. Model selection criteria and weights

Criterion	Weight	Evidence
Bangla and English quality on BanglaPolicyQA	30%	Retrieval and answer metrics of Table 28 on the frozen benchmark
Faithfulness to cited sources	20%	Citation precision and unsupported-claim rate
Safety and robustness	15%	Red-team results; prompt-injection success rate; refusal behaviour
Deployability on local hardware	15%	Memory and latency at the target quantisation on pilot GPUs
Licence and openness	10%	Licence terms; availability of weights; usage restrictions
Transparency and documentation	10%	Model card quality; training-data disclosure [50]

A model that fails any safety threshold in Table 28 is excluded regardless of its total score.
